WHAT IS EPS?

EPS with the technical term is Expanded Polystyrene. It is a lightweight, rigid, plastic foam insulation material. Produced from solid beads of polystyrene. The extension is achieved in a steamed process to form a perfectly closed cell structure. These cells occupy approximately 40 times the volume of the original polystyrene bead. In the next step, the material is moulded into appropriate forms suited to their applications. EPS is 98% engineered air, the plastic material encapsulating the air, harnessing its benefit as excellent insulation and shock absorption material.
